

# TECH-FLO Cal-Bor + Moly

VS.

## Grower's Standard

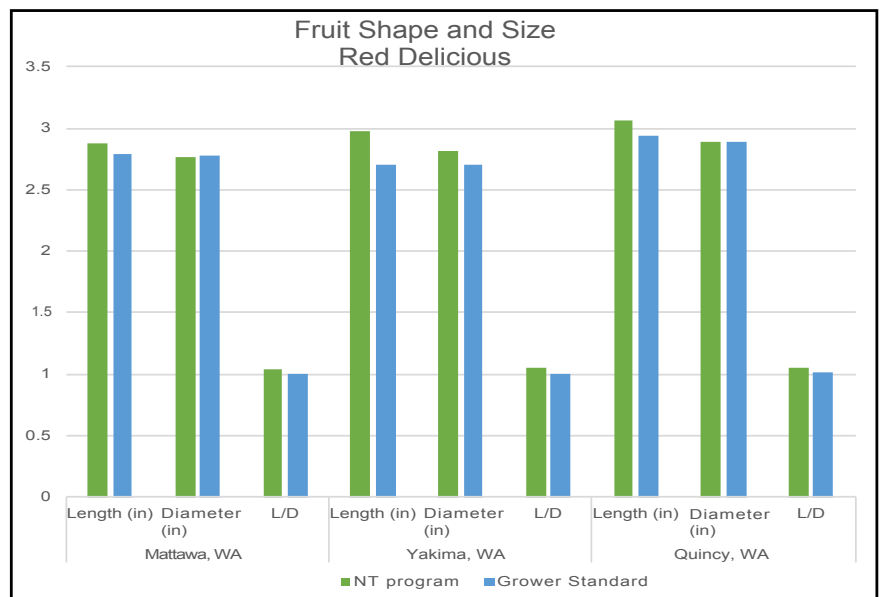

TECH-FLO Cal-Bor + Moly is used in nutrient programs for crops commonly affected by calcium disorders. Molybdenum is added to improve nitrogen utilization. Below are results from some real world trials on pome fruits in the Pacific Northwest where fruit quality and size were the main goals of the growers

Firmer fruit is preferred by many packers

Overall, when compared against grower's standards, adding Tech-Flo Cal-Bor + Moly to apple nutrition programs, growers see more than a 4% increase in fruit size
