

Hi-K 0-26-28

Hi-K 0-26-28 is one of those tools that our growers like to keep a secret. They know that our easy-to-use solution mixes well with most tank mixes, and adding Hi-K to their mid to late season sprays reduces costs.

Get Bigger Nuts and Better Nut Fill

In these almond trials, we switched out the competitive Potassium product our grower uses with Hi-K. **The results were bigger nuts, higher yield and a 12:1 Return on Investment.**

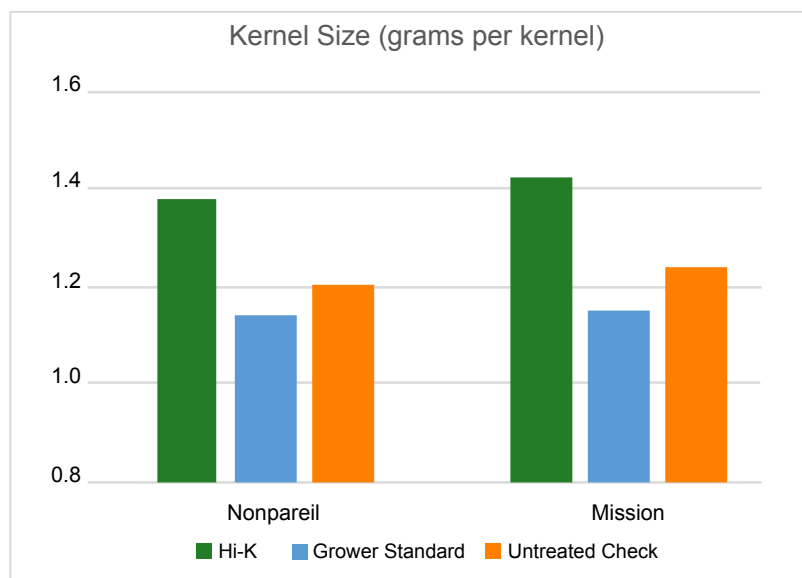

Hi-K was applied during nut fill, 3 weeks apart at rate of 3 qts/acre.

Crop: Nonpareil and Monterey Almonds

Applications were made with regularly scheduled sprays, so no additional application costs were incurred. Always read and follow label.

The stylized N is a registered trademark of Nutrient Technologies, Inc. All rights reserved. v2.2

Hi-K was applied twice in April. Once in May and once in June at rate of 2 qts/acre.

Crop: Nonpareil and Mission Almonds

Add 1- 4 quarts Hi-K per acre
for tree crops during mid to late season sprays
for best results and ROI.
