B-17

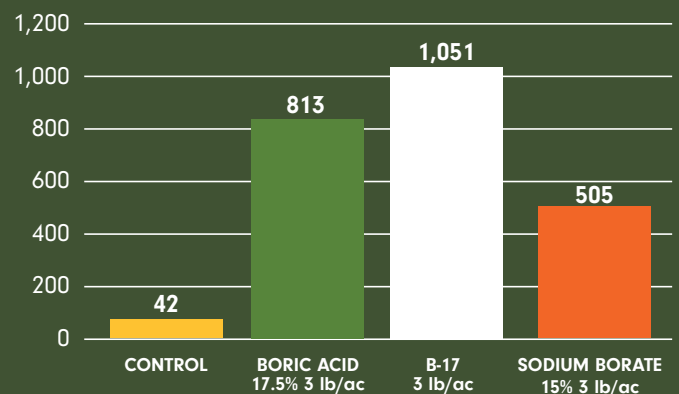

BORIC ACID SPRAY™

Nutrient.TECH
THE EVOLUTION OF AGRICULTURE

NUTRIGANIC B-17 Boric Acid Spray is solely derived from boric acid, dissolves readily, contains no sodium, and with a pH of 6 imparts a slightly acidic effect to the spray solution, as compared to Sodium Borate or MEA Boron which both have pH's in the 9-10 range. NUTRIGANIC B-17 Boric Acid Spray is a soluble, fine granular product formulated with improved dispersion and wetting characteristics to provide superior foliar boron performance. NUTRIGANIC B-17 Boric Acid Spray is CDFA, WSDA, and OMRI approved for organic crop production. It is locally sourced in California and contains all-natural ingredients. Both conventional and organic growers rely on the performance of NUTRIGANIC B-17 Boric Acid Spray for early season bud vigor and fruit set.

To demonstrate its efficacy, NUTRIGANIC B-17 Boric Acid Spray was applied to radishes at 3 lb/acre. 2 common boron products were also applied to radishes at 3 lb/acre. The plants were grown for 7 days after the boron application and the leaf tissue was collected for leaf tissue analysis. NUTRIGANIC B-17 Boric Acid Spray supplied 22% more plant available Boron than Boric Acid, and 52% more plant available Boron than Sodium Borate. NUTRIGANIC B-17 Boric Acid Spray is the most effective, safe, and easy to use soluble Boron product for all your application needs.

Greenhouse Radish Leaf Tissue B (ppm)
