

# ADVANCED TECHNOLOGY MICRONUTRIENT FERTILIZER COATING

## FIELD BOOST™ ZINC 50

- Uniform micronutrient application
- Extended nutrient availability
- Enhanced with SimplyFLO for faster, more uniform coating
- Water based, dust free coating
- Aids in nutrient uptake supporting increased yields

Research shows that micronutrient fertilizer applications are often inefficient. Most micronutrients interact with soil factors which begin to reduce their availability for uptake by plant roots within days to a few weeks after application. Some micronutrient application methods are far superior to others. Maximizing nutrient use efficiency (NUE) to save money is a concern of all growers.

Use of our proprietary Field Boost™ formulations amplify the benefits of prolonged nutrient availability by coating every fertilizer granule for maximum root uptake. This improves overall plant nutrition and enhances plant growth, to support consistent yields, year after year.
