

NexxGen™

NexxGen™ is a unique, biostimulant designed to boost plant metabolism, increase the amount of harvestable lint and improve nutrient assimilation and utilization. It also enables the plant to resist impacts of environmental stress and to increase boll retention leading to increased yields.

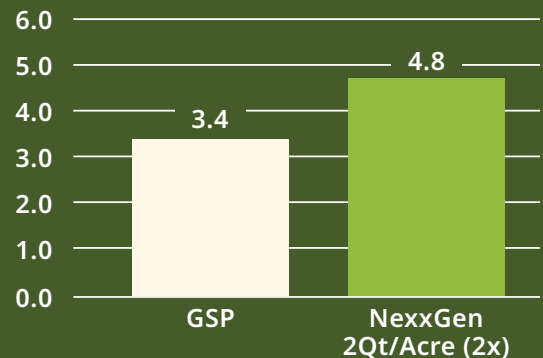

KEY COMPONENTS:

- Contains 5 selected L-amino acids needed by the plant to enhance specific aspects of development.
- Contains seaweed (*Ascophyllum nodosum*) extract obtained through a safe, non-denaturing, extraction process. Promotes induction of anti-stress phytoalexins and efficient nutrient assimilation.
- Micronutrients and trace elements promote cellular response to stimulatory compounds.

RATES AND TIMING

2 Qt/Acre applied with mite spray (late May) + 2 Qt/Acre applied with 1st Pix application (late June)

2024 Upland Cotton Lint Bales/Acre

2025 Upland Cotton Lint Bales/Acre
