

ALL STAR BLEND™

Contains all 14 elements essential for plant growth which do not come directly from water and the air (C,H,O).

These plant nutrients may be lacking in the soil in a readily available form or be out of appropriate balance in the soil solution for optimum crop growth. Foliar application of All Star Blend supplies every nutrient a plant needs to overcome the effects of a transient nutrient deficiency during growth.

The formulation specifics of All Star Blend provide excellent performance in the spray tank and for the crop. Our research shows rapid uptake and weeks-long nutrient supply from this technology. This product is highly compatible with insecticides, fungicides and PGRs.

All Star Blend is a dense product, and each gallon provides far greater quantities of micronutrients than common micronutrient mixes, allowing for economical use.

All Star Blend is beneficial for season long use but may be of special benefit during transitional periods from one growth phase to another such as vegetative to reproductive growth, flowering to fruit set or fruit maturation/grain fill.

Better Fruit Quality:

- Improved storage quality
- Improved shipping quality
- Improved flavor
- Improved color characteristics
